JOSH SILVERMAN

Atlanta, GA | 404-791-1118 | jjsilverman99@gmail.com | linkedin.com/in/joshsilverman1 | https://josh-silverman-portfolio.vercel.app/

Data analytics consultant who builds and validates the full pipeline, from SQL sourcing and KPI definition to Power BI dashboards and machine learning models. Creator of sports analytics projects including a PGA Tour prediction platform with rigorously backtested accuracy. Seeking data analyst, data scientist, and data engineer roles in the sports industry, bringing enterprise consulting discipline to sports business data.

TECHNICAL SKILLS

Languages & Tools: SQL (AWS Redshift, PostgreSQL), Python (pandas, scikit-learn, FastAPI), R, TypeScript/React, Power BI, Tableau, Excel, PowerPoint

Analytics & ML: KPI Development, Dashboard Design, Data Validation, Hypothesis-Driven Experimentation, Predictive Modeling, Regression Analysis, Backtesting, Gradient Boosting, Probability Calibration, NLP (BERT)

Platforms: AWS Redshift, Salesforce Marketing Cloud, Azure, Git/GitHub, Streamlit, Vercel

AI & LLM: AI-Assisted Development (Claude Code, Claude, ChatGPT), Prompt Engineering, LLM Evaluation, Agentic Workflows

PROFESSIONAL EXPERIENCE

NTT DATA — Data Analytics & AI Consultant

Aug 2024 – Present

Client Engagement: National Home Services Franchise Network — Atlanta, GA (Jan 2026 – Present)

- Enabled brand presidents and client leadership to track franchise performance across 14 Power BI health dashboards by writing and validating the SQL behind 55 KPIs per franchise in AWS Redshift, testing every metric against known-good franchise data before release
- Took over monthly financing revenue reporting across six lending partners on short notice and re-engineered it from a hard-coded Python script into a config-driven pipeline with validated, reusable parsing — output feeds a 6-8 person finance team and 14 franchise brands
- Built and maintained a data availability matrix covering 55 KPIs across 14 franchise brands, assessing readiness through brand interviews and API investigation to sequence the client's AWS Redshift to Databricks migration
- Built a subagent that keeps Claude Code restricted to live production tables when generating SQL validation queries in AWS Redshift, working around inconsistent table naming across 14 brands

Prior Rotations/Engagements: AI Engineer / Digital Transformation Consultant (Aug 2024 – Jan 2026)

- Won 1st place at NTT DATA's Global AI Hackathon on a 3-person team, building an LLM evaluation framework that scored model outputs against defined criteria using an LLM-as-judge design, and my team pitched it to the company's Global CEO
- Earned senior leadership buy-in for a call-center automation solution by building BERT-based sentiment models that classified bank customer complaints
- Cut RFP response drafting from hours to minutes by building internal Streamlit AI tools, while supporting agentic AI proof-of-concepts on Azure for public-sector clients

ADDITIONAL EXPERIENCE

PlayOn! Sports — Marketing Technology Intern

Summer 2023

- Analyzed millions of rows of customer data across PlayOn! platforms using Salesforce Marketing Cloud to improve email retention and digital marketing performance
- Built 2 machine learning models in Python and R predicting whether new products would perform correctly in the field across a range of high school sports, with engineered features adopted by PlayOn!'s marketing technology engineers

Miami Heat — Retail Operations Intern

Summer 2022

- Pitched a revenue-generating arena renovation proposal to Heat executive staff as part of a 10-intern team
- Supported warehouse and e-commerce fulfillment operations using RetailPro and Excel

Pro Sports Outlook — Media Coordinator

Summer 2021

- Curated PSO's daily highlights by selecting from hundreds of posts across sports media

PROJECTS

PGA Tour Analytics & Prediction Platform

2026 – Present

- Built and shipped an end-to-end machine learning platform (FastAPI, React, TypeScript) that generates calibrated win, top-5, top-10, top-20, and make-cut probabilities for every player in a PGA Tour field, trained on ~35,800 player-tournament results from 2018 to 2026
- Tested 23 hypotheses through controlled experiments with pre-registered pass/fail gates, kept the 5 that held up out of sample, and showed the model beats random guessing on the make-cut and top-20 markets

EDUCATION

University of Georgia, Terry College of Business — Athens, GA

M.S. Business Analytics — GPA: 3.9 (2024)

B.B.A. Marketing, Sports Management Minor, Business Analytics Emphasis — GPA: 3.6, cum laude (2023)
